Filing a complaint with OCR is voluntary. However, without the information requested above, OCR may be unable to proceed with your complaint. We collect this information under authority of Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973 and other civil rights statutes. We will use the information you provide to determine if we have jurisdiction and, if so, how we will process your complaint. Information submitted on this form is treated confidentially and is protected under the provisions of the Privacy Act of 1974. Names or other identifying information about individuals are disclosed when it is necessary for investigation of possible discrimination, for internal systems operations, or for routine uses, which include disclosure of information outside the Department for purposes associated with civil rights compliance and as permitted by law. It is illegal for a recipient of Federal financial assistance from Health and Human Services (HHS) to intimidate, threaten, coerce, or discriminate or retaliate against you for filing this complaint or for taking any other action to enforce your rights under Federal civil rights laws. You are not required to use this form. You also may write a letter or submit a complaint electronically with the same information. To submit an electronic complaint, go to our web site at: www.hhs.gov/ocr/discrimhowtofile.html. To mail a complaint see reverse page for OCR Regional addresses.

(The remaining information on this form is optional. Failure to answer these voluntary questions will not affect OCR's decision to process your complaint.)

Do you need special accommodations for us to communicate with you about this complaint (check all that apply)?

RE: DISCRIMINATORY PLAN BENEFIT DESIGNS IN TEXAS SILVER QUALIFIED HEALTH PLANS

I. COMPLAINANTS

The Center for Health Law and Policy Innovation of Harvard Law School (CHLPI) advocates for legal, regulatory, and policy reforms to improve the health of underserved populations, with a focus on the needs of low-income people living with chronic illnesses and disabilities. CHLPI works with consumers, advocates, community-based organizations, health and social services professionals, food providers and producers, government officials, and others to expand access to high-quality health care and nutritious, affordable food; to reduce health disparities; to develop community advocacy capacity; and to promote more equitable and effective health care and food systems.

II. DEFENDANT

Community Health Choice (the Defendant) is headquartered in Houston, Texas, reporting \$721 million in revenue for 2014.¹

III. JURISDICTION

This complaint is filed pursuant to Section 1557 of the Patient Protection and Affordable Care Act (ACA).² The ACA provides that “an individual shall not ... be excluded from participation in, be denied the benefits of, or be subjected to discrimination under, any health program or activity” that enters into a “contract of insurance” with the federal government.³ This anti-discrimination clause applies to insurers operating on federal- or

¹ Community Health Choice, *2014 Annual Report* (last visited March 22, 2016), available at <https://www.communitycares.com/Portals/0/Downloads/AnnualReport-14.pdf>.

² 42 U.S.C. § 18116; 45 C.F.R. § 92.101.

³ 42 U.S.C. § 18116(a); 45 C.F.R. § 92.101.

state-based insurance Marketplace exchanges.⁴ The Defendant here is subject to Section 1557 under 45 C.F.R. § 92.2(a) because it offers a QHP on the Texas health insurance Marketplace.

Section 1557 specifically delineates the design of insurance plan benefits as a potentially discriminatory practice.⁵ Section 1557, in turn, provides that an individual shall not be subjected to discrimination on the grounds prohibited under Section 504 of the Rehabilitation Act of 1973 under any health program or activity, any part of which is receiving federal financial assistance, or any entity established under Title I of the ACA or its amendments.⁶ Section 504 of the Rehabilitation Act of 1973 prohibits discrimination against otherwise qualified individuals on the basis of disability.⁷

The Department of Health and Human Services (HHS) Office for Civil Rights (OCR) is granted authority to investigate potentially discriminatory behavior and to enforce compliance with Section 1557.⁸ “OCR is responsible for enforcement with respect to benefit design issues under Section 1557.”⁹ Further, 45 C.F.R. § 92.301 provides that “[t]he enforcement mechanisms available for and provided under Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, Section 504 of the Rehabilitation Act of 1973, or the Age Discrimination Act of 1975 shall apply for purposes of Section 1557.” Under 45 C.F.R. 85.61(d), OCR is required to “accept and investigate all complete complaints for which it has jurisdiction.” Cases of noncompliance may result in suspension, termination, or refusal to grant or continue Federal financial assistance.¹⁰ Should the enforcement efforts of OCR fall on deaf ears, it can and should refer the matter to the Department of Justice for litigation.¹¹

IV. PRELIMINARY STATEMENT

This complaint is filed to notify OCR of discriminatory benefit designs employed by Community Health Choice on the Texas Marketplace. Approximately 82,745 Texans are currently living with HIV,¹² and Community Health Choice has designed Qualified Health Plans (QHPs) that violate Sections 1311 and 1557 of the ACA by preventing these individuals from “meaningful access”¹³ to comprehensive health care coverage that meets their health needs. CHLPI requests OCR to invoke its mandate under the ACA, and put an end to the discriminatory practices of this insurer.

¹³ *See Alexander v. Choate*, 469 U.S. 287 (1985).

In a recent series of reports, CHLPI analyzed trends in HIV medication coverage and costs in the 2016 silver level QHPs in state Marketplace exchanges, including Texas. As a result of its work, CHLPI has seen an alarming national trend towards decrease in coverage and an increase in consumer cost sharing for these treatments.¹⁴ These trends discourage individuals with HIV from enrolling in these QHPs. The issues around cost and coverage of key medications also raise the chances of serious health consequences for enrollees who are unable to afford necessary care.¹⁵

In Texas, CHLPI, along with state partners, reviewed the coverage of all the common regimens recommended as the standard of care for treatment-naïve patients in the *Federal Guidelines for the Use of Antiretroviral Agents in HIV-1-Infected Adults and Adolescents*,¹⁶ as well as other commonly used HIV medications in the 2016 silver level QHPs available on the Texas Marketplace. CHLPI found that the federally-recommended treatment regimens are disproportionately unaffordable to individuals living with HIV under the benefit plan designs of several insurers offering QHPs on the Texas Marketplaces. Silver-level QHPs were chosen for review because they are “the marketplace standard,” meaning that subsidies to lower income enrollees are calculated on the premiums the silver QHPs and certain cost sharing subsidies are available only if an enrollee has selected a silver QHP.¹⁷

In Texas, CHLPI reviewed the coverage of all recommended treatment regimens by the 2016 Silver Qualified Health Plans (QHPs) on the Texas Marketplace. CHLPI also considered the coverage of Atripla, a STR which is not currently recommended for antiretroviral-naïve patients but is widely used in the United States.¹⁸ CHLPI found that several of these plans are unaffordable for many people living with HIV in Texas using the federally recommended treatment regimens. The two QHPs offered by Community Health Choice, Community Health Choice HMO Silver 002 and Community Health Choice Silver 004, are among the most expensive and restrictive for HIV treatment medications in the Texas Market.

Community Health Choice covered virtually all HIV medications, and all relevant HIV medications except for Isentress and Norvir, recommended by the National Institutes of Health, on its highest tier of its formulary. This meant that most relevant medications required cost sharing of 35-45% of the cost of the medication. By covering these medications on the highest tier, Community Health Choice is, in effect, restricting access because this tier requires very high cost sharing. This “adverse tiering” and cost discrimination penalizes people living with HIV.

¹⁸ Horberg, M. & Klein, D, *An update on the use of Atripla in the treatment of HIV in the United States* HIV/AIDS (June 18, 2010).

This restriction of access to HIV medications contradicts the purpose and spirit of the Affordable Care Act (ACA), which is to create meaningful access to health care for all Americans regardless of health status. Insurers on the Marketplace benefit from the ACA's individual mandate and subsidies. Eighty-seven percent of individuals enrolled in a 2015 Marketplace plan qualified for an advance premium tax credit from the federal government.¹⁹ These insurers are benefiting from certain parts of the ACA while disrespecting its purpose by discouraging those with chronic health conditions from enrolling, or by penalizing those who do enroll.

V. RELEVANT LAW

A. Anti-Discrimination Protections under the ACA

1. Section 1557

Under Section 1557, the ACA clearly establishes protections from discrimination based on race, color, national origin, disability, age, sex, gender identity, or sexual orientation.²⁰ Section 1557 applies directly to federal- and state-based Marketplaces,²¹ and therefore applies to Texan Silver QHP insurers. Section 1557 also reinforces the anti-discrimination protections in the ACA by explicitly prohibiting discrimination based on disability.²² The stipulation that HIV is a categorical disability has also been upheld in relevant case law; persons with HIV, both symptomatic and asymptomatic, have physical impairments “that substantially limit one or more major life activities” and are, therefore, protected by the law.²³

The ACA clearly establishes protections from discrimination for people living with HIV who enroll in a silver QHP in Texas. Section 1557 provides for enforcement through the mechanisms available under existing anti-discrimination laws, regulations, and policies.²⁴ The mechanisms relevant to this complaint derive from Section 504 of the Rehabilitation Act,²⁵ which utilizes a definition of disability from the Americans with Disabilities Act. This definition classifies HIV as a “physical or mental impairment that substantially limits one or more of the major life activities of [an] individual.”²⁶

Additionally, although Section 1557 does not expressly define prohibited discrimination, it adopts the language of the Rehabilitation Act regarding disability discrimination, providing that an individual or entity shall not be “excluded from participation in, be denied the benefits of, or be subject to discrimination under” any health program or

²¹ 45 C.F.R. § 92.4.

²² *Id.* at § 92.205.

²³ *See, e.g., Bragdon v. Abbott*, 524 U.S. 624 (1998); *Questions and Answers: The Americans with Disabilities Act and Persons with HIV*, U.S. DEP'T. OF JUSTICE DISABILITY RIGHTS SECTION, ADA.GOV, (last visited, Jul. 15, 2016) <https://www.ada.gov/archive/hivqanda.txt>.

²⁴ 80 Fed. Reg. at 54172-54221.

²⁵ 42 U.S.C. § 18116(b).

²⁶ 45 C.F.R. § 84.52(j).

activity.²⁷ The Supreme Court has specified that the relevant inquiry under the Rehabilitation Act for determining if discrimination has occurred is whether “meaningful access” has been provided to individuals with disabilities.²⁸ The meaningful access inquiry asks “whether those with disabilities are as a practical matter able to access benefits to which they are legally entitled.”²⁹

The Anti-Discrimination Regulations indicate that insurers must make reasonable modifications in policies, practices, and procedures to avoid disability-based discrimination, unless doing so would fundamentally change the nature of the program. Moreover, the **Anti-Discrimination Regulations state that covered entities may not employ discriminatory benefit designs, though remains silent on whether issuers may place all drugs to treat a single medical condition on the plan’s highest cost-sharing tier.** HHS has made its intention on this benefits design practice clear elsewhere, such as in its *2017 Letter to Issuers and Notice of Benefit and Payment Parameters*. HHS notes that “if an issuer places most or all drugs that treat a specific condition on the highest cost formulary tiers, that plan design might effectively discriminate against, or discourage enrollment by, individuals who have those conditions.”³⁰ HHS thus interprets the ACA’s antidiscrimination provisions to apply specifically to instances where issuers place “most or all drugs that treat a specific condition on the highest cost tiers.”³¹

2. Section 1311

As a separate issue, the trends uncovered in CHLPI’s analysis indicate that state regulators are not enforcing the ACA anti-discrimination protections outlined in Section 1311 of the ACA, which prohibits “marketing practices or benefit designs that have the effect of discouraging enrollment in such plan by individuals with significant health needs.”³² The Centers for Medicare and Medicaid Services (CMS) has interpreted the ACA’s antidiscrimination provisions to apply specifically to instances where issuers place “most or all drugs that treat a specific condition on the highest cost tiers.”³³ State regulators in Texas have yet to enforce Section 1311 protections for people living with HIV. OCR, however, has enforcement authority for activities administered by any entity established under Title I of the ACA, which includes state Marketplace exchanges.³⁴

VI. DISCUSSION

A. Recommended Treatment for HIV

HIV is a chronic illness that can be treated but not cured. Individuals need to remain on treatment and take antiretroviral drugs every day for the rest of their lives in order to maintain the benefits of treatment.³⁵ Strict adherence to Antiretroviral Therapy (ART)³⁶ can stop the progression of HIV and prevent its transmission to others.³⁷ One multi-country study has found, for instance, that early initiation of ART resulted in a 96% reduction in HIV transmission.³⁸ These outcomes are beneficial both to affected individuals and to the health system at large, which must bear the costs of sicker, larger populations of individuals with AIDS. There are a total of 25 commonly prescribed antiretroviral HIV drugs on the market. They can be classified into 6 groups: Nucleoside Reverse Transcriptase Inhibitors (“NRTIs”), Non-Nucleoside Reverse Transcriptase Inhibitors (“NNRTIs”), Protease Inhibitors (“PIs”), Integrase Strand Transfer Inhibitors (“INSTIs”), Entry Inhibitors (“EIs”) and Single Tablet Regimens (STRs).³⁹

HIV is an incredibly complex disease that presents and develops differently in different patients. Therefore, it is important that doctors be able to provide treatment plans based on patients’ needs, not on availability under a particular insurance plan. Which drug should be selected from a particular class depends on patient characteristics. Importantly, doctors are instructed to consider the number of doses per day a patient should take in addition to what type of drug they should take.⁴⁰ Accordingly, STRs are preferred because of the ease of taking only one pill per day and the important benefits of greater treatment adherence.⁴¹ Because different STRs include different drug combinations,⁴² it is important that doctors be able to prescribe any STR to a patient in case a given one is not preferable because of a patient’s characteristics or reaction.

There are recommended treatment regimens produced by an expert panel under the aegis of the United States Department of Health and Human Services in conformance with

³⁵ See *About HIV/AIDS*, CENTERS FOR DISEASE CONTROL AND PREVENTION (last updated Dec. 6, 2015), <http://www.cdc.gov/hiv/basics/whatishiv.html>.

³⁶ ART is comprised of a combination of HIV medicines taken as a daily HIV regimen. See *Overview of HIV Treatments*, AIDS.GOV, <https://www.aids.gov/hiv-aids-basics/just-diagnosed-with-hiv-aids/treatment-options/overview-of-hiv-treatments/> (last visited Apr. 10, 2016).

⁴⁰ See *Guidelines*, supra note 16, at K-5.

⁴¹ See *id.* at K1-K2.

⁴² See *Antiretroviral Drugs Used in the Treatment of HIV Infection*, UNITED STATES FOOD AND DRUG ADMINISTRATION (last updated Oct. 8, 2015), <http://www.fda.gov/ForPatients/Illness/HIVAIDS/Treatment/ucm118915.htm>.

recognized health needs of HIV patients and developments in HIV medications.⁴³ The Guidelines are meant to be used broadly by providers who work with HIV-positive patients.⁴⁴ Under these Guidelines, there are currently six treatment regimens used for adult and adolescent treatment-naïve patients (i.e., those who have not taken HIV medications before):⁴⁵

1. dolutegravir⁴⁶ + (abacavir + lamivudine)⁴⁷ = Triumeq (STR).
2. dolutegravir + Truvada (tenofovir DF plus emtricitabine)^{48,49}
3. elvitegravir⁵⁰ + cobicistat⁵¹ + tenofovir alafenamide⁵² + emtricitabine = Genvoya (STR)
4. elvitegravir + cobicistat + (tenofovir DF + emtricitabine) = Stribild (STR)
5. raltegravir⁵³ + Truvada (tenofovir DF plus emtricitabine)
6. darunavir⁵⁴ + ritonavir⁵⁵ + Truvada (tenofovir DF plus emtricitabine)

Thus, in order to ensure the ability of providers to prescribe treatment consistent with the prevailing standard of care, formularies must currently provide access to sixteen primary drugs.⁵⁶ Having an exceptions process to the formulary through which an individual can

⁴³ See generally *Guidelines*, *supra* note 16.

⁴⁴ See *id.* at A-1

⁴⁵ See *id.* at F-3.

⁴⁶ Dolutegravir is an integrase inhibitor (INSTI) with a brand name product Tivicay.

⁴⁷ Abacavir alone is a Nucleoside Reverse Transcriptase Inhibitor (NRTI) with a brand name of Ziagen. Lamivudine alone is also a NRTI with the brand name of Epivir. Abacavir + lamivudine together are an NRTI with a brand name Epzicom.

⁴⁸ Tenofovir disoproxil fumarate (DF) alone is an NRTI with the brand name Viread. Emtricitabine is an NRTI with a brand name of Emtriva. Tenofovir DF plus emtricitabine is an NRTI with the brand name Truvada.

⁴⁹ In certain cases where emtricitabine is part of the combination drug, lamivudine can be substituted.

⁵⁰ Elvitegravir is an integrase inhibitor (INSTI) with a brand name product Vitekta.

⁵¹ Cobicistat is a pharmacokinetic enhancers with a brand name of Tybost.

⁵² Tenofovir alafenamide is a prodrug of the NRTI tenofovir.

⁵³ Raltegravir is an integrase inhibitor (INSTI) with a brand name product Isentress.

⁵⁴ Darunavir is a protease inhibitor (PI) with a brand name product Prezista.

⁵⁵ Ritonavir is a PI with a brand name product Norvir.

⁵⁶ These 16 primary drugs are as follows:

- Tivicay (brand name) – dolutegravir (no generic version available);
- abacavir (generic name) – also available in sulfate form as brand name Ziagen;
- lamivudine (generic name) – also available as brand name Epivir;
- Epzicom (brand name) - abacavir + lamivudine;
- Triumeq (brand name) – STR of dolutegravir + (abacavir + lamivudine);
- tenofovir DF (generic name) – also available as brand name Viread;
- Emtriva (brand name) – emtricitabine (no generic version available); but note that lamivudine may be substituted in certain circumstances;
- Truvada (brand name) – tenofovir DF + emtricitabine;
- Vitekta (brand name) – elvitegravir – (no generic version available);
- Tybost (brand name) – cobicistat – (no generic version available);
- Descovy (brand name) - tenofovir alafenamide + emtricitabine;
- Genvoya (brand name) - STR of elvitegravir + cobicistat + (tenofovir alafenamide + emtricitabine);
- Stribild (brand name) - STR of elvitegravir + cobicistat + (tenofovir DF + emtricitabine);

attempt to access coverage for a drug not on the formulary, prescribed before enrollment, is not enough. This is true because of the uncompensated cost to providers of going through the prior authorization process,⁵⁷ because this coverage is not guaranteed,⁵⁸ and because the process of obtaining this coverage is opaque.

Doctors choose which drugs to prescribe to their HIV patients based on a range of factors, including co-occurring illnesses,⁵⁹ medical history and tolerance. Studies have shown the importance of adherence in maintaining an undetectable viral load, and the greater likelihood of adherence to STRs than to standard multiple pill regimens.⁶⁰ Therefore, it is important for patients to have access through their insurance plans to STRs—which are pharmacologically distinct—as well as various single-drug and combination tablets so that they and their doctors can create optimal treatment plans.

For broad treatment purposes, it is not sufficient that one drug in a particular class may be covered. For example, Isentress and Tivicay are both in the INSTI class. However, Tivicay is specifically recommended to individuals who have resistance to older drugs such as Isentress and to those who are likely to have greater adherence if they are prescribed a once-daily drug, rather than a multi-dose drug such as Isentress.⁶¹ An individual who is currently on Isentress and becomes resistant must be able to switch to Tivicay, necessitating that both medications be covered by his or her insurer, despite being in the same class.

Because compound medications are not interchangeable with their components, physicians prefer to prescribe certain branded medications to achieve the recommended treatment regimens. For example, physicians will seek to prescribe Triumeq, as opposed to Tivicay plus Ziagen and Epivir or Tivicay plus Epzicom. Translating the recommended treatment regimens into their preferred brand formulations results in the following regimens:

1. Triumeq
2. Tivicay + Truvada
3. Genvoya⁶²
4. Stribild
5. Isentress + Truvada
6. Prezista + Norvir + Truvada

-
- Isentress (brand name) – raltegravir (no generic version available);
 - Prezista (brand name) – darunavir - (no generic version available);
 - Ritonavir (generic name for tablet) – also available in tablet / capsule / solution form as brand name Norvir.

⁵⁷ See James L. Raper et al., *Uncompensated Medical Provider Costs Associated with Prior Authorization for Prescription Medications*, 51 CLINICAL INFECTIOUS DISEASES 718, 720 (2010) (providing the amount of time, on average, health care workers spent on prior authorization in a study).

⁵⁸ See *Guidelines*, supra note 16.

⁵⁹ See *id.* at J-1.

⁶⁰ See, e.g., S. Scott Sutton et al., *Single- Versus Multiple-Tablet HIV Regimens: Adherence and Hospitalization Risk*, 4 AM. J. MANAGED CARE 242, 244 (206).

⁶¹ See *Tivicay*, POSITIVELY AWARE, <http://www.positivelyaware.com/tivicay> (last visited Apr. 20, 2016).

⁶² Genvoya was not FDA approved during the open enrollment for the 2016 QHPs. Therefore, it was not included on formularies or in the calculations for this complaint. It has since been added.

We base our cost calculations off the combination of branded medications that the majority of physicians would describe at the best way of achieving the recommended treatment regimens. This means prioritizing use of compound medications and STRs to minimize pill load in order to improve adherence and positive outcomes.

B. Community Health Choice’s Discriminatory Plan Benefit Designs in Texas QHPs

In Texas, the Defendant is one of several insurers whose Silver QHPs have plan benefit designs that show clear adverse tiering and/or cost discrimination. Community Health Choice’s two QHPs cover seven out of the eight medications on the highest or specialty tier with the requirement of 35-45% coinsurance. They cover two medications (Isentress and Norvir) on a lower tier but require \$100-110 copayment. Both these medications are recommended under the *Guidelines* as a component of a treatment regimen that also requires medications the Defendant places 35-45% coinsurance on. Depending on the QHP, a person living with HIV can expect to spend up to \$978 per month on a recommended treatment regimen.⁶³⁶⁴

Data on cost of treatment for each treatment regimen and QHP offered by the Defendant can be found in the Appendix.

C. Effects of Discriminatory Plan Benefit Designs

The plan benefit designs of the Defendant are discriminatory in nature and adversely impact both public health and people living with HIV in Texas. Because of the structure of its formulary design as applied to HIV medications, the Defendant places a heavy burden on individuals living with HIV enrolled in its QHP and raises significant public health concerns.

1. Impact for Community Health Choice Enrollees Living with HIV

Based on the estimated monthly cost calculations and median household income data for Texas taken from the U.S. Census,⁶⁵ a person living with HIV with a Community Health Choice Silver QHP can expect to spend 9-22% of her income on a treatment regimen (and 14-33% of her income on the combined costs of the insurance premium and treatment).

⁶³ Prices paid by insurers (or by their intermediaries – pharmacy benefit managers) to pharmaceutical companies for medications are not publicly available. Several indexes exist that provide information about drug prices. Two such indexes that are widely used are the Average Wholesale Price (AWP) and the Big 4 Price. AWP is considered an inflated cost estimate. The Big 4 Price is the amount paid by four government agencies – the Department of Veterans Affairs, the Department of Defense, the Public Health Service, and the U.S. Coast Guard – and includes large, negotiated discounts. For this reason, it is considered a very low estimate of the price paid by private insurance companies. See Department of Veterans Affairs, *Determining the Cost of Pharmaceuticals for a Cost-Effectiveness Analysis* (last visited April 4, 2016), available at <http://www.herc.research.va.gov/include/page.asp?id=pharmaceutical-costs>. In this analysis, we use the Big 4 pricing index to conservatively estimate costs for private insurers. The actual prices paid by insurers and passed on to consumers are likely to be even higher than the estimates presented here.

⁶⁴ Calculated using Big 4 pricing.

⁶⁵ *Median Household Income by State (Texas) – Single-Year Estimates*, U.S. CENSUS BUREAU, (last visited March 22, 2016), <https://www.census.gov/hhes/www/income/data/statemedian>.

The current cost of STRs and newer HIV medications on Texas Silver QHPs offered by the Defendant restricts meaningful access to effective treatment. Meaningful access is critical both to improving health outcomes for people living with HIV *and* to preventing the transmission of HIV. Without consistent, affordable access to appropriate treatments, people living with HIV in Texas are more likely to get sick and more likely to transmit the virus to others, increasing the number of people in need of HIV treatment.

2. *Public Health Impacts*

One of the main goals of ART is to suppress the HIV virus in a person's bloodstream.⁶⁶ This viral suppression can take, for someone beginning ART, between 3 and 6 months. Once suppressed, if a person continues with consistent treatment, their risk of sexually transmitting the virus to another person is reduced by 96%. If a person stops ART, their viral load will increase up to a level above suppression.⁶⁷ In order to minimize new infections, current HIV cases must be properly managed and as many individuals as possible must achieve viral suppression and remain virally suppressed.

HIV is an incredibly complex disease that presents and develops differently in different patients. It is important that doctors be able to provide treatment plans based on patients' needs, not based on availability under a particular insurance plan. There are multiple classes of drugs, and which drug should be selected from a particular class depends on patient characteristics. For example, until the recent development of STRs, an ART regimen consisted of taking a combination of three or more drugs every day.⁶⁸ As expected, the simplified STR regimen is associated with increased treatment adherence rates. Patients are more likely to consistently take their medication and maintain viral suppression if their treatment regimen is one pill per day.^{69,70} However, multiple pill regimens might still be preferred in some cases due to a patient's resistance testing results, drug toxicity, drug-drug interaction, and virologic efficacy.⁷¹ To achieve widespread viral suppression, neither STR nor multiple pills may be treated as interchangeable, even within a drug class.⁷²

D. Discriminatory Plan Benefit Design Practices

Since the Defendant places almost all key HIV medications on its highest formulary tier and requires significant cost sharing for its highest tier, it has created QHPs that are hostile to enrollees living with HIV. As such, it is likely guilty of discriminatory plan benefit design practices, including high cost sharing, adverse tiering, and exploiting actuarial value.

1. *High Cost Sharing*

At the most basic level, the cost sharing required by insurers practicing discriminatory benefit design is problematic because it renders these medications unaffordable. Although the ACA requires a cap on out of pocket payments, high cost sharing requirements can prevent individuals from enjoying the protections of the cap by requiring them to meet it within the first several months of the year. For low income individuals, finding the funds to pay several thousand dollars in the first few months of their insurance plan can be challenging.

High cost sharing is not an absolute requirement to provide health insurance in Texas. Competitors, such as Blue Cross Blue Shield and United Healthcare, charged much lower copayments for the same medications. For example, Blue Cross Blue Shield required its enrollees to pay \$50-60 per month for most HIV medications, with some newer medications priced at \$100-120. The insurers who offer more reasonable cost sharing requirements demonstrate that it is not a business requirement to require very high cost sharing for all HIV medications.

2. *Adverse Tiering*

Other insurers, including the Defendant, are instead practicing discriminatory plan design such as adverse tiering. Adverse tiering is a mechanism insurance companies use to discourage people with high-cost chronic diseases from selecting their plans by structuring drug formularies such that the necessary medication regimens for that disease, including generics, are in the tier with the highest cost sharing.⁷³ A study out of the Harvard School of Public Health found that the difference in out-of-pocket HIV drug costs between those plans which used adverse tiering and other plans was stark. Enrollees who dealt with adverse tiering had an average annual cost per drug of more than triple that of enrollees in plans that did not adversely tier (\$4,892 vs. \$1,615), with a nearly \$2,000 difference per year even for generic drugs.⁷⁴ Even after factoring in the lower premiums and the ACA's cap on out-of-pocket spending, the study estimates that a person with HIV would pay more than \$3,000 for treatment annually under a plan that practices adverse tiering than in another plan.⁷⁵

3. *Exploiting Actuarial Value*

⁷³ Douglas B. Jacobs & Benjamin D. Sommers, *Using Drugs to Discriminate — Adverse Selection in the Insurance Marketplace*, 372 N.E. J. Med. 399, 401 (2015).

⁷⁴ *Id.*

⁷⁵ *Id.*

Prime facie high cost-sharing is not the only way for a plan benefit design to discriminate against those with chronic conditions such as HIV. Despite the ACA's intent to provide access to health care for Americans living with disabilities, insurers can offer discriminatory plan benefit designs because of the way in which actuarial value, the standard upon which they are judged, is calculated. The ACA's requirement for silver-level insurance plans on the marketplace exchanges is an actuarial value of 70%, which means the insurer is expected to pay 70% of health care expenses while enrollees in that plan pay 30% (via deductibles, copayments, and co-insurance).⁷⁶ The actuarial value for a plan is calculated as an average across all enrollees.

Because of the nature of the actuarial value goal as an average, insurers can choose between offering plans that are equitable between the healthy and the sick or favoring healthy enrollees by pushing more costs onto vulnerable populations. QHPs can be structured to have a higher premium or deductible and lower cost sharing, or a lower premium and higher cost sharing. Both can have the same actuarial value and meet the ACA's requirement, but the latter is more liable to disproportionately affect people with chronic conditions.⁷⁷

Community Health Choice's QHPs appear to be financed significantly through cost sharing, which disproportionately penalizes people with chronic conditions who need long-term access to expensive treatments (e.g., STRs and newer antiretroviral treatments). Insurers offering plans on the silver marketplace can structure plan benefit designs in this way because their average, actuarial value is still 70%, even though people living with HIV could likely end up paying much more. Because of the very high costs of HIV medication, it is likely that Community Health Choice enrollees living with HIV receive a lower actuarial value. As a result, Community Health Choice is able to lower its premiums and probably deliver higher actuarial values to healthy enrollees, making it more attractive to enrollees who are cheaper to insure while discouraging "undesirable" sicker enrollees.

To close this loophole, the actuarial value of QHPs should be further restricted. In addition to the requirement that the average value be 70%, silver QHPs should limit the percentage that any individual with a silver QHP could bear to a certain range around that average value. This would ensure that people living with chronic diseases would not be unfairly penalized by insurers who game the system of actuarial value.

E. Discriminatory Plan Benefit Design Practices have Problematic Policy Implications

By discouraging those with HIV from enrolling in its QHPs, Community Health Choice causes clustering of individuals with HIV in a smaller number of plans and insurers. This creates financial disincentives for insurers that are currently abiding by ACA anti-discrimination mandates. Ultimately, without legal intervention the higher costs inflicted on law-abiding insurers through clustering will lead them to raise premiums or alter their benefit designs in ways similar to Community Health Choice. Both United Healthcare

⁷⁶ Kaiser Family Foundation, *What the Actuarial Values in the Affordable Care Act Mean* (April 2011), available at <https://kaiserfamilyfoundation.files.wordpress.com/2013/01/8177.pdf>.

⁷⁷ *Cost-Sharing*, Health Coverage Guide, (last visited Jul. 15, 2016), available at <http://healthcoverageguide.org/reference-guide/benefits-providers-and-costs/cost-sharing/>.

and Aetna, two major national insurers, have already announced that they will be withdrawing from most Marketplaces because of the difficulty of competing in this market. Therefore, if Section 1557 is not enforced against Community Health Choice, adverse selection will lead to a “race to the bottom,” where savvy insurers will require individuals with HIV to pay increasingly more for their medications.

By providing plans to HIV beneficiaries that mandate the highest levels of cost sharing, Community Health Choice beneficiaries are subject to a *de facto* denial of meaningful access to HIV medications. No reasonable HIV drug consumer would choose to enroll or stay either of Community Health Choice’s QHPs. Considering that the median monthly income in Texas is \$4,381.33, cost sharing between 9-22% of this value is impractical for most Texas residents. As such, beneficiaries on these Community Health Choice QHPs are more likely to stop taking HIV medications, thereby increasing the chances of transmission and raising the expenses incurred by the state. Moreover, as discussed above, Community Health Choice’s prescription drug benefit design is entirely unreasonable as illustrated by the Texas market norm. For example, insurers such as Aetna require only a \$15-40 copayment for the same medications. Other major insurers, such as Molina Marketplace and Blue Cross Blue Shield require copayments of \$50-60 for most key HIV medications.

Troublingly, given the demographics of the HIV epidemic, Community Health Choice’s adverse tiering has a particularly negative impact on groups that have historically experienced discrimination.

F. Lack of Transparency

In addition to the adverse tiering and cost discrimination, the lack of transparency in finding the expected health care cost for a person living with HIV on each QHP is a barrier to meaningful access in itself. CHLPI encountered many obstacles in acquiring accurate information on these QHPs, which is a violation of insurers’ responsibility of transparency as part of the Marketplace. One of the primary purposes of the Marketplace exchanges is to enable consumers to choose the right plan for their health needs. By obscuring the information needed to make that decision, insurers are making it extremely difficult, if not impossible, for consumers to choose the right health insurance plan.

The only information available online about Community Health Choice’s specialty tier restrictions is that they must be prescribed by an in-network provider or Community Health Choice will not cover any costs. CHLPI called Community Health Choice to ask about additional restrictions, was placed on hold for 15 minutes, then was told that the call volume was too high and the call was disconnected. CHLPI called back twice and was disconnected in the same way.

G. Comparison of HIV Medication to Other Prescription Drug Benefits

As discussed above, placing the majority of recommended HIV medications on the highest drug formulary tier is not a business necessity for insurers. Other medications covered by Community Health Choice have similar costs but are placed on lower formulary tiers, giving enrollees greater access to their needed treatments. The disparity in formulary tiering for medications at similar costs suggests that Community Health

Choice purposefully designed the 2016 silver QHPs to discourage enrollment of people living with HIV.

CHLPI considered three medications – Seroquel, Saphris, and Invega – used to treat psychiatric disorders such as schizophrenia and bipolar disorder. These medications are similar to HIV medications because the conditions they treat are chronic and affect a similar proportion of the U.S. population.^{78,79,80} Additionally, these medications, like HIV treatment regimens, are not interchangeable.⁸¹ Seroquel, Saphris, and Invega have Big 4 prices of \$596.86, \$512.93, and \$495.73, respectively.⁸² Despite the high price, all three insurers cover these medications on non-specialty tiers in their formularies.

For example, on Community Health Choice’s HMO Silver 002, a monthly supply of Seroquel would cost a patient with bipolar disorder \$110. On their HMO Silver 004, the same supply would be \$100 per month for the patient. A patient with HIV on the same plan would pay approximately \$620-798 each month for his or her Atripla medication and \$599-770 for a combination of Truvada and Tivicay. Despite the similar price paid by the insurer for these two drugs, very different costs are passed on to patients living with HIV and patients living with schizophrenia.

VII. RELIEF REQUESTED

CHLPI requests that OCR use its authority to enforce these violations of the ACA and to ensure meaningful access to health care for people living with HIV in Texas. Similar violations in Florida, where insurers were charging high copayments and coinsurance for HIV medications, have resulted in large fines and settlements.⁸³

CHLPI requests that OCR require the Defendant to adjust their Silver QHPs to be non-discriminatory toward people living with HIV. This would ensure that people living with HIV enrolled in a QHP from any of these three insurers would be able to manage their condition free from cost discrimination and adverse tiering.

CHLPI requests that OCR also review the HIV prescription drug benefit designs of all Silver QHPs offered on the Texas Marketplace to ensure compliance with the ACA’s anti-discrimination clause. CHLPI also requests that OCR investigate why the Texas Department of Insurance, responsible for approving insurance plans on the Marketplace, has allowed these plans to be offered on Texas’ exchange. OCR should provide oversight and guidance to ensure discriminatory plans are not approved in the future.

⁷⁸ According to the National Institute of Mental Health, schizophrenia affects 1.1% of the adult U.S. population. According to the Centers for Disease Control and Prevention, HIV affects 0.4% of the U.S. population.

⁷⁹ *Schizophrenia*, NAT’L INSTITUTES OF MENTAL HEALTH, (last visited April 17, 2016), <http://www.nimh.nih.gov/health/statistics/prevalence/schizophrenia.shtml>.

⁸⁰ *HIV in the United States: At a Glance* CENTERS FOR DISEASE CONTROL AND PREVENTION, (Sept. 29, 2015), <http://www.cdc.gov/hiv/statistics/overview/ata glance.html>.

⁸¹ Huskamp H., *Managing psychotropic drug costs: will formularies work?* (2003), HEALTH AFFAIRS.

⁸² Assuming recommended dosage for adults, this is the Big 4 price for a one month supply of each medication.

⁸³ *Florida Insurance Commissioner fines Humana \$500,000*, THE NATIONAL HEALTH LAW PROGRAM, (Feb. 18, 2016), <http://www.healthlaw.org/news/press-releases/470-florida-insurance-commissioner-fines-humana-500000>.

To ensure compliance in the future for people living with other chronic diseases, CHLPI requests that OCR work to develop and implement methods for detecting discrimination in insurance plans offered on federal- or state-based exchanges. These methods should focus on detecting discrimination against vulnerable populations.

Finally, CHLPI requests that OCR require all insurers offering plans on federal- or state-based exchanges to demonstrate meaningful transparency of their prescription drug benefit costs. This would enable consumers to make an informed decision about their health care, which is the original purpose of the Marketplace exchange.

People living with HIV have the right to access health care that does not discriminate against them on account of their disability. CHLPI urges OCR to investigate the HIV drug benefit designs of the Defendant in the Texas Marketplace. CHLPI is available to provide any assistance necessary to ensure that people living with HIV in Texas are provided meaningful access to health care, as mandated under the ACA.

Respectfully Submitted,

APPENDIX

Table 1: Cost of treatment plans on each Silver QHP, in dollars spent per month. Calculated using Big 4 pricing.

Treatment Regimen	Big 4 Pricing of Treatment Regimen	Community Health Choice HMO Silver 002	Community Health Choice HMO Silver 004
Atripla	\$1,773.42	\$ 798	\$ 620
Truvada and Isentress	\$893.82 + \$750.40	\$ 512	\$ 413
Truvada and Tivicay	\$893.82 + \$818.61	\$ 770	\$ 599
Stribild	\$1,528.59	\$ 688	\$ 535
Truvada, Prezista, and Norvir	\$893.82 + \$700.64 + \$35.90	\$ 828	\$ 658
Triumeq	\$2,174.09	\$ 978	\$ 761
Genvoya	\$1,528.52	\$ 688	\$ 535

Table 2: Percent of median Texas income spent on each treatment plan on each Silver QHP. Calculated using Big 4 pricing.

	Community Health Choice HMO Silver 002	Community Health Choice HMO Silver 004
Atripla	18%	14%
Truvada and Isentress	11%	9%
Truvada and Tivicay	17%	13%
Stribild	15%	12%
Truvada, Prezista, and Norvir	18%	14%
Triumeq	22%	17%
Genvoya	15%	12%
